

LIFELINE PUBLICATIONS PRESENT

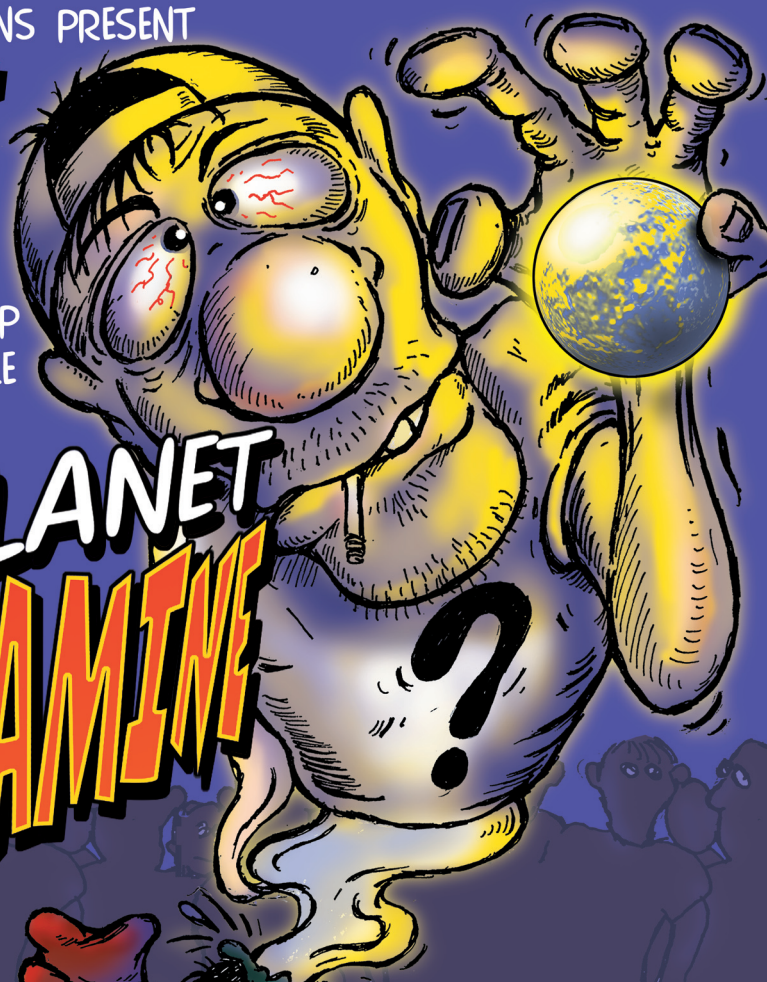

PEANUT PETE

DISAPPEARING UP
HIS OWN K-HOLE

IN PLANET KETAMINE

ANY EFFECT
YET PETE?

**IN SPACE
NO ONE
CAN HEAR
YOU
DREAM!**

THIS IS A STRANGE
PARTY REG! THEY ALL LOOK LIKE
ZOMBIES

OH FUCK, IT'S JASON &
THE PSYCHONAUTS ON
TECHNO SMACK

TECHNO SMACK ?

TECHNO SMACK
SPECIAL K, CK1 'K'
OR KETAMINE

'SUPPOSE
WE'LL HAVE TO
TAKE IT.

I'VE HAD THAT
ONCE...HORRIBLE!

THIS IS POWDER, IT'S
DIFFERENT IT ONLY LASTS
ABOUT AN HOUR.
HAVE A BREAK HAVE A
KET TRIP!

YOU WANT SOME?

NEW LEGISLATION MEANS THAT KETAMINE WILL
BECOME A CLASS C DRUG SOME TIME IN 2006

SHALL I SHAN'T I SHALL I SHAN'T I
SHALL I SHAN'T I SHALL I SHAN'T I.

SOUNDS
GREAT!

URRRM

YEP

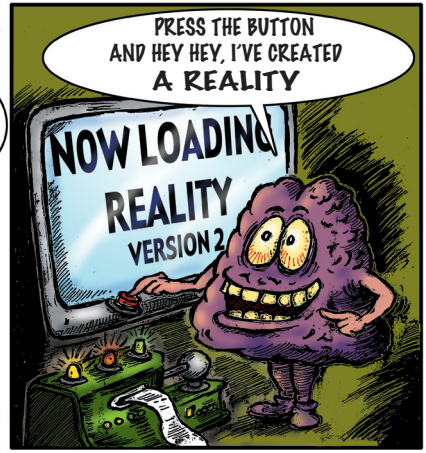

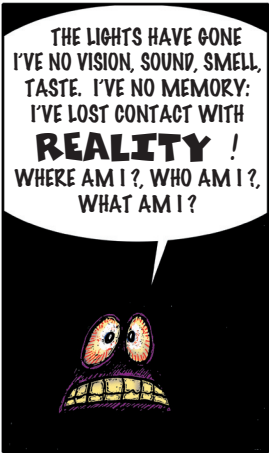

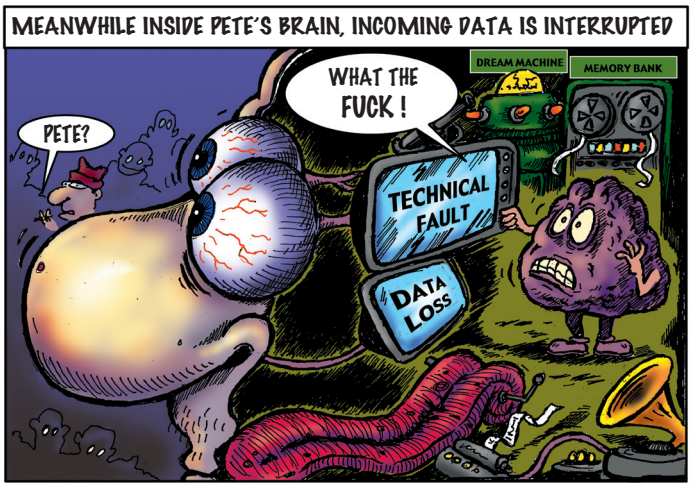

I'VE HAD IT A FEW TIMES SO I NEED MORE
THAN YOU TO GET THE SAME EFFECT.
AFTER A FEW TIMES IT'S LIKE A SORT OF
A MIX OF ALL DRUGS. YOU'VE HAD SOME
COKE, SO YOU'LL GET THE
WOBBLY BITS.

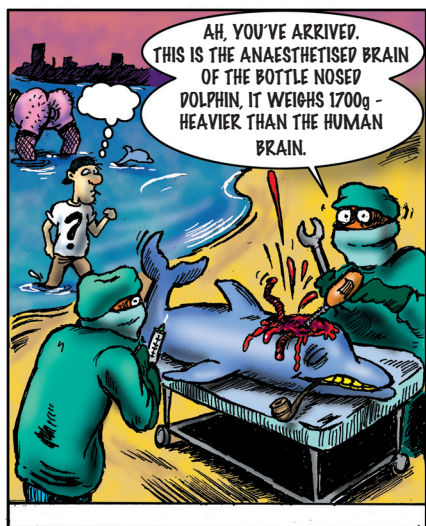

WOBBLY
BITS?

YOU WILL HAVE TROUBLE
CO-ORDINATING YOUR LIMBS

WOBBLY
BITS?

YOU MIGHT
FEEL SICK OR
THROW UP

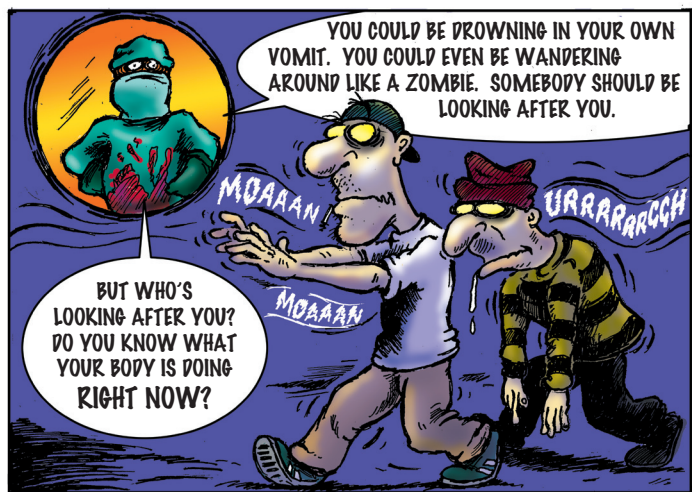

AH, YOU'VE ARRIVED. THIS IS THE ANAESTHETISED BRAIN OF THE BOTTLE NOSED DOLPHIN. IT WEIGHS 1700g - HEAVIER THAN THE HUMAN BRAIN.

GENERAL ANAESTHETICS PUT YOU TO SLEEP. LOCAL ANAESTHETICS MAKE BITS OF YOU GO NUMB. KETAMINE IS A DISSOCIATIVE ANAESTHETIC. YOUR BRAIN NO LONGER THINKS IT'S PART OF YOUR BODY.

IT'S QUITE SAFE AS ANAESTHETICS GO. IT DOESN'T SLOW DOWN BREATHING OR THE HEART. THAT'S WHY WE USE IT IN SURGERY WITH CHILDREN. OF COURSE 'SAFE' MEANS WITH A TOP SURGEON LIKE MYSELF USING IT. WE PUT THE PATIENT TO SLEEP TO STOP THEM HALLUCINATING

YOU COULD BE PROWNING IN YOUR OWN VOMIT. YOU COULD EVEN BE WANDERING AROUND LIKE A ZOMBIE. SOMEBODY SHOULD BE LOOKING AFTER YOU.

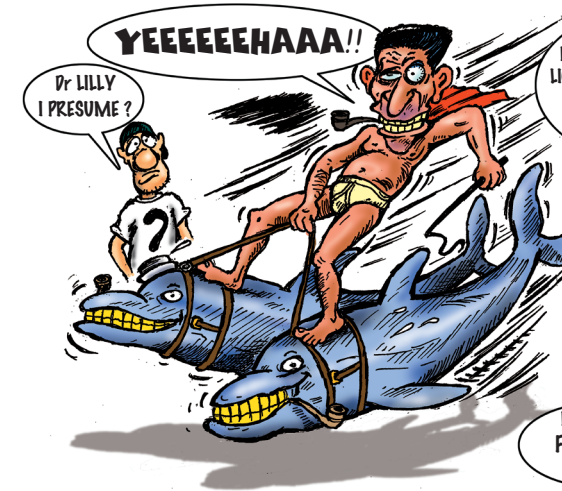

BUT WHO'S LOOKING AFTER YOU? DO YOU KNOW WHAT YOUR BODY IS DOING RIGHT NOW?

MOAAAN

URRRRRGGH

ASK Dr LILLY ABOUT USING A GROUND CONTROLLER. LET ME JUST TAKE THIS MASK OFF, AH THAT'S BETTER!

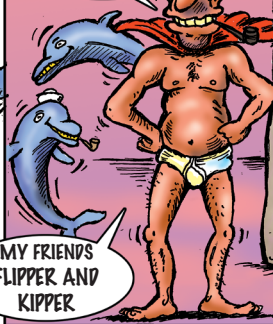

YEEEEEEHAAA!!

Dr LILLY I PRESUME?

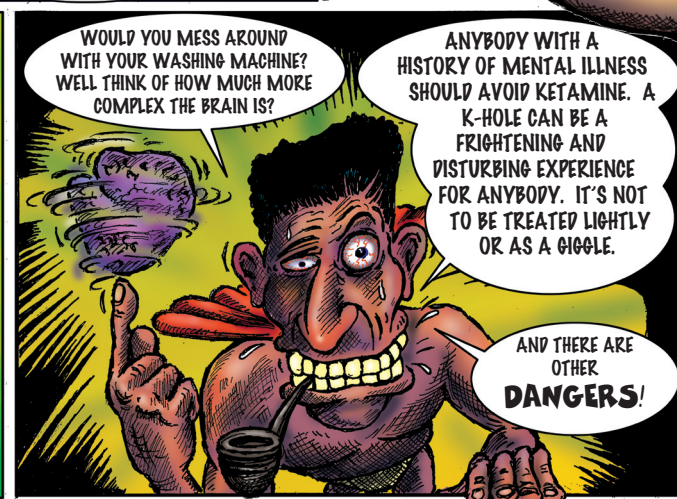

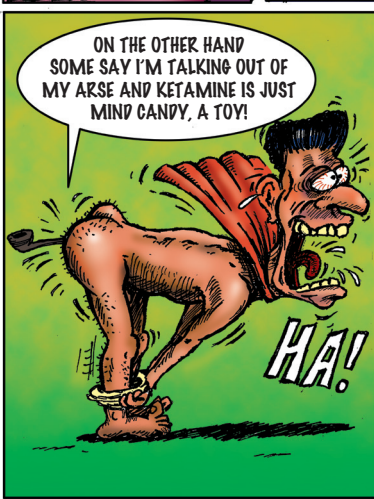

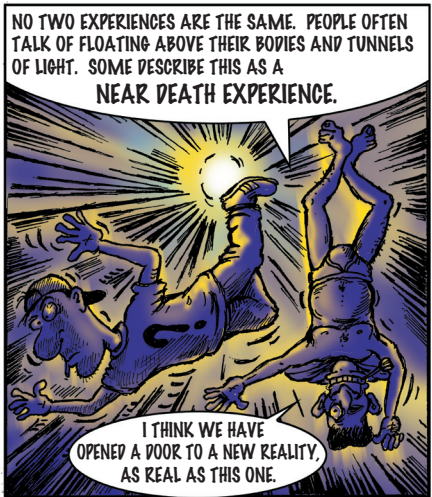

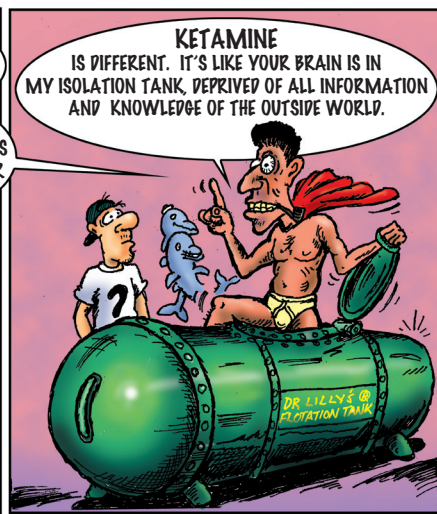

WELCOME EARTHLING. I AM THE MULTI DIMENSIONAL LIGHT BEING AND EXPLORER OF META-REALITIES
Dr JOHN C LILLY

MY FRIENDS
FLIPPER AND
KIPPER

MY RESUME

DR JOHN C LILLY M.D.
FIRST CAME TO FAME BY USING COMPUTERS TO TALK TO DOLPHINS. HE INVENTED THE ISOLATION TANK, AS A WAY OF DEPRIVING THE BRAIN OF OUTSIDE STIMULUS. INSIDE HIS TANK HE USED A RANGE OF HALLUCINOGENIC DRUGS TO EXPLORE OTHER REALITIES (HE CALLED THEM META-REALITIES). THE FILM 'ALTERED STATES' WAS BASED ON HIS LIFE. DR LILLY LATER USED KETAMINE REGULARLY. A DRUG HE FOUND COULD TRANSPORT HIM TO HIS NEW FOUND REALITIES BY ITSELF.

SHORT TERM MEMORY LOSS IS ALMOST CERTAIN. IT CAN BRING ON EPILEPTIC FITS IN THOSE PRONE TO THEM. ALTHOUGH OVERDOSE IS RARE, THERE HAVE BEEN DEATHS (PARTICULARLY WHEN INJECTING). KETAMINE USE CAN BECOME COMPULSIVE - NOT PHYSICAL BUT PSYCHOLOGICAL ADDICTION.

I WAS ADMITTED TO A PSYCHIATRIC HOSPITAL ON THREE OCCASIONS SUFFERING FROM KETAMINE PSYCHOSIS. ON ONE OF THESE OCCASIONS, I RANG THE PRESIDENT TO WARN HIM OF.....

A MACHINE PLOT TO TAKE OVER THE WORLD
THAT ONLY THE DOLPHINS CAN SAVE US FROM

ALTHOUGH THE PRESIDENT BELIEVED ME, THE DOCTORS DIDN'T

KETAMINE PSYCHOSIS (LIKE AMPHETAMINE PSYCHOSIS) GENERALLY FADES AFTER A FEW WEEKS WITHOUT THE NEED FOR DOCTORS - PROVIDED YOU STOP TAKING THE DRUG. KETAMINE IS A POWERFUL DRUG EXPERIENCE, IF YOU USE IT REGULARLY YOU ARE ASKING FOR TROUBLE.

KETAMINE SNORTED AS A POWDER ONLY LASTS AN HOUR OR SO. YOUR FRIEND SHOULD HAVE WAITED TO TAKE HIS UNTIL YOU WERE BACK SAFELY.....

HI HO KIPPER, AWAY!

REG SHOULD HAVE BEEN YOUR GROUND CONTROLLER

ARE THESE K-HOLES?

NO, ARSE HOLES GRAB A LADDER

YOUR TIME IS UP EARTHLING. LET'S JUST HOPE YOU CLIMB INTO THE RIGHT ARSEHOLE

I HOPE NOTHING IS COMING THE OTHER WAY!

WOW, I'M BACK IN MY OWN REALITY!

I'M BACK!

INTENSE!

WANT SOME MORE?

FACTS KETAMINE

Ketamine is a dissociative anaesthetic. Used medically it is relatively safe as it does not suppress breathing or vital functions. Used as a street drug there are a number of serious risks. If Ketamine powder is snorted the effects last somewhere between 20 minutes and an hour. If it is swallowed as a pill the effects last much longer. Injecting Ketamine carries all the usual risks of using needles and increases the likelihood of undesirable effects.

- **R**emember: **'THERE IS NO SUCH THING AS TOO SMALL A DOSE OF KETAMINE'**. Taking a very small line and waiting for 20 minutes and then taking another small line if required is better than taking a big one and hoping it's the right dose. To reduce the risk of overdose if you are injecting Ketamine, use a much smaller dose than you would if snorting.
- **I**f you decide to use it take it somewhere you feel safe and secure. Get somebody sober to stay with you (a **'GROUND CONTROLLER'**). They can look after you and can reassure you in the phases when you can talk and listen and make sure you don't hurt yourself.
- **V**omiting is common. It is therefore wise to avoid eating at least three hours before you take ketamine (as you would if given an anaesthetic in hospital). It is particularly important that if somebody loses consciousness they aren't lying on their back. Choking your own vomit in this position is a common cause of death.
- **I**f somebody loses consciousness (they are not moving or making any noise when you try to rouse them), put them in the **RECOVERY POSITION**. If they don't come round call an ambulance and tell the ambulance crew what they have taken.
- **S**hort term memory loss is an occupational hazard. Tolerance rapidly develops to Ketamine (it takes more to get the same effect). Ketamine can become a drug used compulsively. Psychological dependence is possible. Ketamine psychosis (similar to amphetamine psychosis) is a result of using too much too often. The paranoia and delusions usually fade and disappear if you stop using. If not see a doctor.
- **I**f you have a mental health problem or suffer from fits or are at all worried about any of the dangers mentioned **DON'T** take it.
- **N**ew legislation means that ketamine will become a class C drug some time in 2006.
